381	Wedge-billed Wren-Babbler	<i>Sphenocichla humei</i>	04/08/2003	An unbelievable look at one of the "least lovely" birds in the world, as well as one of the rarest. This bird was known from only six specimens until it was rediscovered in Bhutan in 2001. We had tried taping it out without success when David heard a bird he didn't recognize. After recording the song and trying to lure the bird out, we were prepared to leave when Dion suggested trying the Wren-babbler tape given to him by another guide. The bird popped out and gave us a fantastic look, calling back repeatedly.	Bhutan: Limithang Rd	2003 VENT Bhutan Trip
